

Basic Elements of Block diagram:

Description	Elements of Block diagram
Differentiator	$x(t) \rightarrow \left[\frac{d}{dt} \right] \rightarrow \frac{d}{dt} x(t)$
Integrator with zero initial condition	$x(t) \rightarrow \left[\int \right] \rightarrow \int x(t) dt$
Multiplier	$x(t) \rightarrow \left[a \right] \rightarrow ax(t)$
Signal Adder	$x_1(t), x_2(t) \rightarrow \left[+ \right] \rightarrow x_1(t) + x_2(t)$

Construct the block diagram of the system described by the equation.

$$\frac{d^2 y(t)}{dt^2} + 2 \frac{dy(t)}{dt} + 3y(t) = \frac{d}{dt} x(t) + 5x(t)$$

$$y(t) = -\frac{1}{3} \frac{d^2 y(t)}{dt^2} - \frac{2}{3} \frac{dy(t)}{dt} + \frac{4}{3} \frac{dx(t)}{dt} + \frac{5}{3} x(t)$$

$$\frac{d^2 y(t)}{dt^2} + 2 \frac{dy(t)}{dt} + 3y(t) = 4 \frac{dx(t)}{dt} + 5x(t) \quad \text{Draw the}$$

Block diagram using integrators.

Solution:

Integrate the given equation with zero initial conditions

$$\frac{dy(t)}{dt} + 2y(t) + 3 \int y(t) dt = 4x(t) + 5 \int x(t) dt$$

again integrate

$$y(t) + 2 \int y(t) dt + 3 \iint y(t) dt dt = 4 \int x(t) dt + 5 \iint x(t) dt dt$$

$$y(t) = -2 \int y(t) dt - 3 \iint y(t) dt dt + 4 \int x(t) dt + 5 \iint x(t) dt dt$$
