

Deontological Ethics

Deontological Ethics

DEONTOLOGICAL ETHICS is closely associated with *Immanuel Kant's* model of ethical theory.

Deontological Ethics

It argues that the *morality*, that is, the rightness or wrongness, of a human act *depends on whether such act fulfills a duty or not*, rather than on its consequence.

Deontological Ethics

Hence, *deontological ethics is duty-based.*

As a matter of fact, deontology comes from the Greek word *deon*, which means *duty*.

Deontological Ethics

One of the basic ideas in deontological ethics is that some *actions are right or wrong in themselves, regardless of their consequences.*

For example, people have the obligation to tell the truth even if doing so might produce some unfavorable

Deontological Ethics

► In other words, as Kant would have us believe, *telling the truth is always “right”* in itself even if, again, doing so might produce some unfavorable results.

► Hence, *telling a lie*, on the contrary, *is always wrong* for deontological ethics.

Deontological Ethics

Scenario 1:

For instance, a physician has just discovered that her patient is having a stage 4 breast cancer.

However, the physician cannot divulge the truth to her patient right away because the latter is having a cardiac condition as well.

Deontological Ethics

- *If we are to consider the consequences of the act of telling the truth to the patient, the latter may have a sudden cardiac arrest and eventually die.*

From the **consequentialist's** point of view, therefore, **it is better to tell a lie** to the patient and instead divulge the truth to the significant others to avoid sudden death on the part of the patient.

Deontological Ethics

But from the point of view of *deontological ethics*, *telling the patient about her real condition is the right thing to do* even if doing so might result in a cardiac arrest.

Truth

Lie

Deontological Ethics

In *deontological ethics*, therefore, before we make moral decisions, we have to *consider first which actions are right and wrong and proceed from there.*

Design a cancer disease detection model based on ethical theories

- Discuss the ethical points needed for designing a cancer detection model based on consequentialist's point of view
- Discuss the ethical points needed for designing a cancer detection model based on the deontologist's point of view
