

$x(n) = \{1, 4, 3, 2\}$ ,  $h(n) = \{1, 3, 2, 1\}$  Determine the  
 $\uparrow$   
 Convolution sum of two sequences.

$$x(-1) = 1 \quad h(0) = 1$$

$$x(0) = 4 \quad h(1) = 3$$

$$x(1) = 3 \quad h(2) = 2$$

$$x(2) = 2 \quad h(3) = 1$$

Lower limit of  $x(n)$  is  $-1$

Upper limit of  $x(n)$  is  $2$

Lower limit of  $h(n)$  is  $0$

Upper " " " " is  $3$

Convolution formula is

$$Y(n) = \sum_{k=-\infty}^{\infty} x(k) h(n-k)$$

Need to find the limits for  $k$  and  $n$ .

$$(-1+0) \leq n \leq (2+3)$$

$$\boxed{-1 \leq n \leq 5}$$

$$\boxed{-1 \leq k \leq 2}$$

$$y(n) = \sum_{k=-1}^2 x(k)h(n-k)$$

$$= x(-1)h(n+1) + x(0)h(n) + x(1)h(n-1) + x(2)h(n-2)$$

Now put  $n$  value from  $-1$  to  $5$ .

when  $n = -1$

$$y(-1) = x(-1)h(0) + x(0)h(-1) + x(1)h(-2) + x(2)h(-3)$$

$$= 1 \times 1 + 4 \times 0 + 3 \times 0 + 2 \times 0$$

$$= 1$$

when  $n = 0$

$$y(0) = x(-1)h(1) + x(0)h(0) + x(1)h(-1) + x(2)h(-2)$$

$$= 1 \times 3 + 4 \times 1 + 3 \times 0 + 2 \times 0$$

$$= 3 + 4 = 7$$

when  $n = 1$

$$y(1) = x(-1)h(2) + x(0)h(1) + x(1)h(0) + x(2)h(-1)$$

$$= 1 \times 2 + 4 \times 3 + 3 \times 1 + 2 \times 0$$

$$= 2 + 12 + 3$$

$$= 17$$

When  $n=2$

$$\begin{aligned}y(2) &= x(-1)h(3) + x(0)h(2) + x(1)h(1) + x(2)h(0) \\&= 1 \times 1 + 4 \times 2 + 3 \times 3 + 2 \times 1 \\&= 1 + 8 + 9 + 2 \\&= 20\end{aligned}$$

When  $n=3$

$$\begin{aligned}y(3) &= x(-1)h(4) + x(0)h(3) + x(1)h(2) + x(2)h(1) \\&= 1 \times 0 + 4 \times 1 + 3 \times 2 + 2 \times 3 \\&= 4 + 6 + 6 \\&= 16\end{aligned}$$

When  $n=4$

$$\begin{aligned}y(4) &= x(-1)h(5) + x(0)h(4) + x(1)h(3) + x(2)h(2) \\&= 1 \times 0 + 4 \times 0 + 3 \times 1 + 2 \times 2 \\&= 3 + 4 = 7\end{aligned}$$

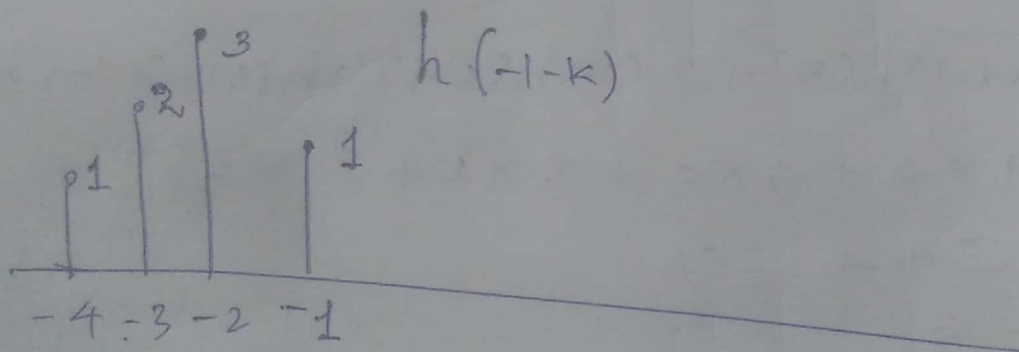

When  $n=5$

$$\begin{aligned}y(5) &= x(-1)h(6) + x(0)h(5) + x(1)h(4) + x(2)h(3) \\&= 1 \times 0 + 4 \times 0 + 3 \times 0 + 2 \times 1 \\&= 2\end{aligned}$$

$$y(n) = \{1, 7, 17, 20, 16, 7, 2\}$$

↑

Graphical Method!

$\boxed{y(-1) = 1}$

When  $n=0$

$$\underline{\underline{y(0)}}$$

$$y(0) = 0 + 0 + 3 + 4 = 7$$

When  $n=1$

$$\underline{\underline{y(1)}}$$

$$y(1) = 0 + 2 + 4 + 3 + 2 = 17$$

When  $n=2$

$$\underline{\underline{y(2)}}$$

$$y(2) = 1 + 8 + 9 + 2 = 20$$

when  $n=3$

when  $n=4$

$y(4)$

$$y(4) = 3 + 4 = 7$$

When  $n=5$

$y(5)$

$$y(5) = 2$$

Cross Verification:

|   | 1 | 4  | 3 | 2 |
|---|---|----|---|---|
| 1 | 1 | 4  | 3 | 2 |
| 3 | 3 | 12 | 9 | 6 |
| 2 | 2 | 8  | 6 | 4 |
| 1 | 1 | 4  | 3 | 2 |

$$y(n) = \{1, 9, 17, 20, 16, 7, 2\}$$
