

SRM Institute of Science and Technology College of Engineering and Technology School of Computing

Mode of Exam **OFFLINE**

DEPARTMENT OF COMPUTING TECHNOLOGIES

SRM Nagar, Kattankulathur – 603203, Chengalpattu District, Tamilnadu

Academic Year: 2032-2024 (ODD/EVEN)

Test: CLAT-3
Course Code & Title: 18CSE357T-Biometrics (Elective)
Year & Sem: 3 & 4 Year/5 & 7 Sem
Duration: 100 minutes
Max. Marks: 50

rear & gent. 5 & 4 Tear/5 & 7 gent										171662	. IVICII	10. 50			
Course Artic	ulation	Matri	x: (to b	e placed	<i>l</i>)

	Part – A (10 × 1 = 10 Mark Instructions: Answer all	(s)				
Q. No	Question	Marks	BL	CO	PO	PI Code
1	The primary purpose of using biometrics is to providenon-repudiable authentication. a. Repudiable authentication b. Non-repudiable authentication c. Identification d. Recursive Process	1	1	4	1	1.6.1*
2	ANSWER b Which is not comes under Physiological Biometric traits a. Face recognition b. Finger Print c. Iris d. Signature ANSWER d	1	1	4	1	1.6.1
3	Hidden biometrics are a. Subjective b. Appearance c. Intrinsic d. Degradation Process. ANSWER c	1	1	4	4	1.6.1
4	Among the given options, what can be correctly referred to as a proprietary finger scanning method: a. Extraction b. Recognition c. Auto-correction d. Bifurcation	1	1	4	2	1.6.1
5	ANSWER a Intrusion affects the basic of a biometric system. a. Integrity b. Segmentations c. Edge d. Model ANSWER a	1	1	4	1	1.6.1
6	is the main concern in immigration and naturalization service Unique Identification Authority	1	1	5	2	1.6.1

	service Unique Identification Authority					
	a. Identification					
	b. Authentication c. Attack					
	d. Security					
	ANSWER d			_		
10	traits are also considered classic or traditional, such as faces, fingerprints or signatures	1	1	5	2	1.6.1
	a. Soft Biometric					
	b. Hidden Biometric					
	c. Hard Biometric d. Functional Biometric					
	ANSWER c					
	Part – B ($5 \times 2 = 10$ Marks)					
11	Instructions: Answer any five What is meant by sensor fusion? State its reasons.	2	2	4	2	1.6.1
1 1 1						
11	Sensor fusion is combining of sensory data or data derived from					
11	disparate sources such that the resulting information has less					
11	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually.					
12	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem.	2	2	4	2	1.6.1
	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from	2	2	4	2	1.6.1
	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem.	2	2	4	2	1.6.1
12	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from both the basic approaches, (feature transformation approach and biometric cryptosystem) it is referred to as a hybrid biometric cryptosystem.			-		
	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from both the basic approaches, (feature transformation approach and biometric cryptosystem) it is referred to as a hybrid biometric cryptosystem. State the three properties of template.	2	2	4	2	1.6.1
12	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from both the basic approaches, (feature transformation approach and biometric cryptosystem) it is referred to as a hybrid biometric cryptosystem.			-		
12	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from both the basic approaches, (feature transformation approach and biometric cryptosystem) it is referred to as a hybrid biometric cryptosystem. State the three properties of template. Cryptographic security Performance Revocability	2	2	4	2	1.6.1
12	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from both the basic approaches, (feature transformation approach and biometric cryptosystem) it is referred to as a hybrid biometric cryptosystem. State the three properties of template. • Cryptographic security • Performance • Revocability Distinguish between Impersonation and Obfuscation.			-		
12	disparate sources such that the resulting information has less uncertainty than would be possible when these sources were used individually. Explain about hybrid biometric cryptosystem. When a template security scheme clearly involves elements from both the basic approaches, (feature transformation approach and biometric cryptosystem) it is referred to as a hybrid biometric cryptosystem. State the three properties of template. • Cryptographic security • Performance • Revocability Distinguish between Impersonation and Obfuscation. The impersonation could be either casual or targeted.	2	2	4	2	1.6.1

17	• Surveillance.)				
17	Describe Instructions: Answer all)				
17	Describe					
		15	4	4	3	1.6.1
	(i) Impersonation					
	This refers to the situation where an impostor attempts to intrude					
	the system by posing himself as another authorized user. • The					
	impersonation could be either casual or a targeted.					
	(ii) Obfuscation					
	Any deliberate attempt by an attacker to change his biometric					
	characteristic in order to avoid detection by the biometric system is called obfuscation.					
	(iii) Spoofing					
	This is the most well-known attack at the user interface level, and					
	it involves the presentation of a spoof biometric trait.					
	• A spoof is defined as any counterfeit biometric that is not					
	obtained from a live person					
	(or)					
18	What are the five ways to breach the security of a biometric	15	4	4	3	1.6.1
	system? Explain each in detail.					
	. Collusion This refers to the sceneric where on outhorized year willingly.					
	This refers to the scenario where an authorized user willingly turns malicious and attacks the biometric system either					
	individually or in collaboration with external adversaries					
	• Coercion					
	A coercion attack is similar to collusion, the only difference being					
	that a coerced user does not carry out the attack willingly					
	• Negligence					
	External attackers can also exploit the negligence of authorized					
	users in order to circumvent the biometric system.					
	• Enrollment Fraud The adversary may enroll himself into the hiematric system					
	The adversary may enroll himself into the biometric system illegally (under a false identity) by producing his biometric traits					
	along with false credentials					
	• Exception Abuse					
	Most biometric systems are equipped with a fall-back mechanism					
	in order to permit handling of exceptional situations that may					
	cause denial of-service to legitimate users.					
19	Explain the pros and cons of implementing Biometric	15	3	5	3	1.6.1
	Application in Airport Screening Process.					
	biometrics is improving your overall experience. To start, many					
	states around the world now require biometric identification as part of the VISA application process. In the UK, for instance, you					
	can share your digital identity – in the form of fingerprints or a					
	facial scan – with the authorities to expedite your application and					
	the pre-screening process Moreover, airports are beginning to trial					
	new forms of mobile check-in to provide a seam Moreover,					
	biometrics is helping to remove the hassle of multiple checks					
	while in the airport. Whether you're purchasing goods in duty free					
	or about to board the flight, biometrics will eliminate the need for					
	you to present your boarding pass or passport to verify your					
	identity. Instead, you will be a biometric token – based on facial					
	recognition software —which allows you to move about the airport freely and securely.					
	neery and securery.					
	(or)		·	<u> </u>	<u> </u>	<u> </u>
20	Clarify the role of Biometrics in Stock Market. Give a detailed	15	3	5	3	1.6.1
	elucidation of effects of Biometric system in the stock market.					
	So, Biometrics does play a role in Stock Market sector as its wide					
	series of implementations on different security devices and					
	hardware, led to huge production of capacitive scanners and cameras, which are capable of real-time facial recognition and					

	data capturing. Some of the leading companies are Synaptics, Gentex, Nvidia and Alibaba.			
	Top Leading Companies in this			
S	sector			
	• SYNAPTICS			
•	• GENTEX			
•	• NVIDIA			
•	• ALIBABA			
•	• FaceX			

^{*}Performance Indicators are available separately for Computer Science and Engineering in AICTE examination reforms policy.
